Education

Jorhat Engineering College <i>Bachelor of Technology in Computer Science and Engineering (CGPA: 7.67)</i>	August 2026 Jorhat, Assam
Maharishi Vidya Mandir <i>10+2 Science (Percentage: 93.66)</i>	July 2021 Guwahati, Assam

Experience

Maventic Innovative Solutions Pvt. Ltd. <i>Developer Trainee</i>	November 2025 – July 2026 Bengaluru (Remote)
- Developed and maintained enterprise-grade SAP applications using SAP CAP, SAP Fiori/UI5, CDS, and OData V4, implementing secure backend services, business logic, and role-based authorization. - Deployed and optimized applications on SAP BTP Cloud Foundry, integrating SAP HANA Cloud, workflow automation, draft handling, and responsive Fiori interfaces to streamline enterprise business processes.	
Innect Technologies Pvt. Ltd. <i>Development Intern</i>	June 2025 – October 2025 Jorhat, Assam
- Worked on MVP stage project 'Environment Monitoring and Automation System'. Part of the three member team responsible for designing and developing the mobile application for monitoring and real-time sensor data visualization. - Implemented user and profile management, sensor data streaming into time-series database, fetching data for monitoring, developing the application UI and visualization graphs.	
Indian Institute of Information Technology (IIITG) <i>Student Intern</i>	June 2024 – July 2024 Guwahati, Assam
- Developed a full-stack web application with Go and Gin framework to facilitate event registration and user management with HTML and Tailwind CSS for UI. - Implemented secure user authentication with JWT and integrated MySQL using GORM for efficient data handling and CRUD operations.	

Projects

Desktop Session Restoration Daemon for Linux Systems Go, Linux, JSON
- Designed and developed a Linux daemon that automatically detects impending power failures, captures the complete desktop session state, and restores applications after system reboot. - Developed a desktop application that provides a GUI for configuring the daemon, viewing restoration history, and manually creating or restoring checkpoints, which are JSON-based session snapshots containing running processes, command-line arguments, working directories, and environment details.
Cloud Games – Multiplayer Browser Game Platform Go, Javascript, Nginx, AWS
- Designed and developed a cloud-based multiplayer browser gaming platform supporting real-time gameplay across multiple concurrent game rooms using Go and WebSocket-based communication. - Deployed the application on AWS EC2 with Application Load Balancer and Auto Scaling Groups, enabling automatic scaling based on CPU utilization to handle variable traffic loads efficiently.
Burd Flutter, Tensorflow, Flask, Pandas, NumPy
- Led the design and development of a Flutter-based Android application for real-time bird species identification using a fine-tuned EfficientNetB0 model on a custom bird species dataset and evaluated model performance before deployment. - Built a Flask-based backend server for an API-based model serving architecture that handles API requests from the mobile app to process bird images and return species predictions.

Technical Skills

Languages & Frameworks: Go, Python, JavaScript, SQL, Flutter, Node.js
Tools & Technologies: AWS, REST APIs, Git, GitHub, MySQL, Linux, Postman, Nginx, Grafana, SAP BTP, SAP HANA, SAP Fiori/UI5, CAPM
Concepts: DBMS, OS, OOP, AI, Debugging
